

# **ARE YOU A PARENT WITH HEARING LOSS?**

## **DO YOU HAVE AN ADULT CHILD 21 YEARS OR OLDER?**

### **The University of Louisville Audiology Program**

is conducting a study to explore the impact of hearing loss on adult children, whose parents are hard of hearing.

This information may help to develop more effective hearing health care in the future. Participation in the study requires the parent with hearing loss to consent to the release of their hearing test results and the completion of an internet survey by the adult child. This survey will take approximately 10 to 15 minutes to complete.

If you are interested in participating, please contact us at [hearing@louisville.edu](mailto:hearing@louisville.edu) or at (502)-852-3990.

Jill Preminger, PhD - Principal Investigator
